

E220 Z Splice Plate will replace the E218 Splice Plate effective by December 1, 2007.

The plate has a "Z" fold on both sides for simplified splicing of ZMesh heating element. The ZMesh slides into each Z fold, is gently crimped or compressed, and then soldered as usual. Always keep the flame of the soldering torch on the "Z" fold and never on the ZMesh.

The E220Z Splice Plate will list for \$27.10 each.
