

STEP 5 — ACTIVATION DEVICE

Many different types of Heatizon Systems activation devices are currently available through Heatizon Systems' Distributors and dealers. Heatizon Systems offers activation devices that range from simple switches to temperature/moisture sensors and telephone or computer activators.

Power requirements for specific devices vary based upon the device selected. Some devices are battery operated or mechanical, and require no line power at all. Other activation devices operate on 120/240VAC line power, or on 24VAC delivered from the CBX6T, CBX23T or Heatizon Part # M360.

Each activation device is shipped complete with customized wiring instructions for proper installation. To avoid damaging Heatizon products, make certain to use the Heatizon customized wiring instructions and schematics to connect the device to the Heatizon System. The wiring diagram is also available online at www.heatizon.com. Your activation device also includes operating and programming instructions, if applicable.
